| | 17. Shooting line |

The archery fields, measuring 220 by 90 metres, is located close to the Canoeing and Rowing Basin. It is divided into sectors for men and for women by a corridor, 10 m wide, where a tower for the shooting director was installed. The field had a total of 70 galleries, each with its own target. Pavilions for technical officials and scoreboards were located on the sides of the sectors.

A sports building was constructed near the field to house scorekeeping and information services and officials' quarters. The glassed-in wall facing the field allows good observation. Besides, an observation platform was equipped on the roof, where seats for VIPs and officials were located during the Games.

Temporary stands seating 3,000 spectators were installed, adjoining the later walls of the building.

A training field was provided near the competition field.

Archery Fields Sports Building Plan

1. FITA offices and VIP lounge
2. Technical officials' quarters
3. Press rooms
4. Computer terminal rooms

View of the sports building and stands near the archery competition field

Following the Games, active use is being made of the archery fields for training and competitions in archery.

The fields were designed by the Moscow Research and Design Institute of Cultural, Recreational, Sports, and Health Facilities.

Archery

The competition was held from July 30 through August 2 on the Olympic Archery Field in Krylatskoe.

Temporary bleachers with 3,000 seats were installed for spectators.

The competition site fully complied with the existing regulations.

The field is covered with natural grass.

It had mainly Soviet-made equipment and implements. Target wooden stands, position numbers, and bow racks complied with the international competition rules.

The International Archery Federation (FITA) had its offices in specially prepared rooms in pavilions.

Two mobile multipurpose bulb letter-digital scoreboards, each with 8 lines by 30 characters (Electroimpex/VBKM-Villesz, Hungary), and 2 Soviet-made display scoresheets were used.

This Olympic Archery competition was the first to use the apparatus which automatically set the time of preparation and shooting in succes-

sion for three rotations of archers, including the prolonged duration of long-distance rotations, with appropriate audio and light signals set time for resumed shooting, and randomly set the rotation order. A special scoreboard had an elapsed time counter and displayed the number of rotation and the number of shooting series. The equipment was manufactured in the USSR.

The competition was supervised by the FITA Technical Commission and jury of appeal—12 members from 7 countries (3 from the USSR). They were assisted by 43 Soviet support officials.

There were no changes in the programme or regulations of the competition, compared to Montreal.

67 archers representing 25 countries took part in the competition.

One protest was made to the jury of appeal against a decision taken by the Technical Commission concerning the score of an Australian female competitor. The protest was granted.
